

## Property tax Calculator

There are two programs used for tax calculation:

PDB-pgm1: calculate tax rate

PDB-pgm2: calculate property tax (get tax rate from pgm1)

You are to get both programs to work.

Documentation:

PDB-ptax1-doc: tax rates by government unit

PDB-ptax2-doc: dollar amounts by government unit (FYI)

Notes:

In PDB-pgm1, the variables name are the first letter of each taxing body (except Chicago and cook county).

Note:

Get the dollar amount of: 4341 (cents will not match)

Why: the tax rates are actually calculated with 6 decimal places and rounded to 3 decimal places for the print out.
